The mid-crustal architecture of a continental arc - a transect through the South Central Zone of the Pan-African Damara Belt, Namibia

by

Christoffel Jasper Anthonissen

Thesis presented in partial fulfilment of the requirements for the degree of

Master of Science

at the University of Stellenbosch

2009

Supervised by Prof. Alex Kisters

Co-supervised by Prof. Gary Stevens
Appendix V: Composite cross-section of the study area

Otjimbingwe domain - Upright tight SE-verging folding in rocks of primarily the Tinkas Fm at the continental backstop.

Etusis domain - Open folding and shallow shearing along a the AMC/DSG contact. Thin-skinned tectonics.

Dorneb domain - Shallowly intruded Salem-type granites. A strength beam in the crust.

Audawib domain - A transition from SE to NW verging D2 folds in a basement cored nappe. Thick-skinned tectonics.

Diorites preserved along thrust contact
