SUMMARY

The Constitution of the Republic of South Africa promotes participatory, cooperative governance and environmental conservation. This constitutional directive is enhanced into the National Environmental Management Act and other conservation laws. These legal requirements for active community participation in natural resources management, including benefit sharing are sufficiently captured in the SANParks' policy and strategy for the management of national parks. The aim of this study is to detect whether SANParks is committed to implement this noble policy and strategy in the Tsitsikamma National Park to simultaneously achieve biodiversity conservation and socio-economic development. This was accomplished by conducting personal observations, interviews and by informal interactions with four communities in the vicinity of the park. A workshop with community leaders, interviews with park officials and assessment of the park's official records and reports also contributed useful information. Accordingly, the views of the local communities were assessed on three major themes: local community support to the conservation mandate of the Tsitsikamma National Park; the depth of community participation in the management of the park; and the community views for improving relationships with the park.

First, it was found that the respondents' ethnic groups, area of birth and their language proved to be the best socio-economic indicators of their support to the park's conservation mandate. The respondents who are native to the area and coloured were the most negative towards the park's no-fishing policy. Second, the respondents' area of birth, main sources of income, levels of education, employers and their age proved to be the best predictors of their responses to benefit sharing with the park. The same socio-economic characteristics influenced their views of active involvement in the management of the park. Few respondents reported having benefited from the park. The majority of respondents felt that they were inadequately represented on the park management. Third, black community members in Tsitsikamma were more willing to forsake fishing on provision of alternatives, while the coloured community members would need more than alternative benefits. All the respondents with tertiary educational qualifications maintained that communities would desist from their desires to fish if the communities were involved in decision-making in the management of the park. Finally, the study concludes that there are weak synergies between biodiversity conservation and sustainable rural development in the Tsitsikamma region.

OPSOMMING

Die Grondwet van die Republiek van Suid-Afrika bevorder deelnemende, koöperatiewe regeringsbestuur en omgewingsbewaring. Dié grondwetlike voorskrif word verder ondersteun deur die Wet op Nasionale Omgewingsbestuur and ander omgewingswetgewing. Hierdie wetlike vereistes vir aktiewe gemeenskapsdeelname in natuurlike hulpbronbestuur, insluitende die deel in voordele, is bevredigend bevat in SANParke se beleid en strategieë vir die bestuur van nasionale parke. Die doel van die studie is om te bepaal of SANParke verbind is tot die implementering van die edele beleid en strategieë in die Tsitsikamma Nasionale Park om gelykydig die bewaring van biodiversiteit en sosio-ekonomiese ontwikkeling te bewerkstellig. Die doel is bereik deur persoonlike observasies te maak, onderhoude te voer en informele interaksies met vier gemeenskappe in die omliggende area rondom die park. ‘n Werkswinkel met gemeenskapsleiers, onderhoude met park personeel en die assessorering van die park se amptelike dokumente en verslae het ook nuttige inligting verskaf. Gevolglik is die plaaslike gemeenskappe se opinie oor drie hooftemas bepaal: plaaslike gemeenskapsondersteuning vir die Tsitsikamma Nasionale Park se bewaringsmandaat; die mate van gemeenskapsdeelname in die bestuur van die park en die gemeenskappe se voorstelle vir die verbetering van hul verhouding met die park.

Eerstens is daar bevind dat die respondentē se etniese groepe, plek van geboorte en hul taal die beste sosio-ekonomiese indikators is van hul ondersteuning vir die park se bewaringsmandaat. Die bruin respondentē wat inboorlinge van die area is, was die negatiefste teenoor die park se ‘geen-visvang’ beleid. Tweedens, is daar bevind dat die respondentē se plek van geboorte, hoofbronne van inkomste, vlakke van opleiding, werkgewers en hul ouderdom die beste sosio-ekonomiese voorspellers is van hul response teenoor die deel van voordele met die park. Dieselfde sosio-ekonomiese eienskappe het hul siening van aktiewe deelname in die bestuur van die park beïnvloed. Min respondentē het aangedui dat hul voordeel trek uit die park. Die meerderheid respondentē het gevoel dat hul onbevredigend verteenwoordig word op die betsuur van die park. Derdens, was die swart gemeenskaplede meer gewillig om op te hou visvang as alternatiewe voordele voorsien word, terwyl die bruin gemeenskapslede meer as alternatiwe voordele vereis. Al die respondentē met tersiêre opleiding kwalifikasies het aangedui dat die gemeenskappe hulle daarvan sal weerhou om vis te vang as die gemeenskappe betrek word by besluitneming in die bestuur van die park. Laastens bevind die studie dat daar swak sinergieë bestaan tussen biodiversiteitsbewaring en volhoubare landelike-ontwikkeling in die Tsitsikamma gebied.

TABLE OF CONTENTS

	Page
Chapter 1: Introduction	1
1.1 Introduction	1
1.2 Basic concepts	2
1.3 Background to the study	2
1.3.1 Legal framework for community involvement in conservation	6
1.3.2 Tsitsikamma National Park policy and strategy for community participation	7
1.3.3 Overview of current park operations with communities	10
1.4 Problem statement	13
1.5 Research objectives	14
1.6 Description of the study area	15
1.6.1 Proclamation of the Tsitsikamma National Park	16
1.6.2 Natural resources use by communities	17
1.6.3 Phasing out of fishing	18
1.7 Methodology	20
1.7.1 Criteria for selecting stakeholders	21
1.7.2 The survey	21
1.8 Socio-economic characteristics of the surveyed respondents	23
1.9 Significance of the study	24
1.10 Expected outcome and contribution of the study	25
1.11 References	26
Chapter 2: Synergies between biodiversity conservation and sustainable rural development	29
2.1 Introduction	29
2.2 Pre-colonial conservation practices in Africa	29
2.2.1 Sacredness of nature	31
2.3 The face of colonial conservation in southern Africa	32
2.3.1 Rationale for a change	33
2.4 The face of modern conservation	33

Chapter 2 (continued)	Page
2.4.1 The need for community participation in biodiversity conservation	35
2.5 Concepts of community	39
2.5.1 Rural communities and sustainable development	40
2.6 The role of policy-making in biodiversity conservation and sustainable development	40
2.7 Conflicts between sustainable development and nature	41
2.8 Poverty alleviation, biodiversity conservation and sustainable development	43
2.9 Creating nature stewardship in local people	46
2.10 References	48
Chapter 3: Local community responses to fishing in the Tsitsikamma National Park	54
3.1 Introduction	54
3.2 Results	55
3.3 Discussions	68
3.3.1 The park's 'no-fishing' policy	69
3.3.2 Who should fish in the park?	70
3.3.3 Illegal fishing	71
3.4 Conclusions	74
3.5 References	76
Chapter 4: Local community responses to benefit sharing, communication and involvement in decision-making	77
4.1 Introduction	77
4.2 Results	78
4.3 Discussions	94
4.3.1 Benefit sharing with the park	96
4.3.2 Park related projects and partnerships	99
4.3.3 Communication with the local communities	102
4.3.4 Involvement in decision-making	103
4.4 Conclusions	103
4.5 References	104

	Page
Chapter 5: Local community perceptions for overturning negative attitudes towards the Tsitsikamma National Park	105
5.1 Introduction	105
5.2 Results	106
5.3 Discussions	122
5.3.1 Fishing in the park	122
5.3.2 Benefits the communities desire from the park	126
5.3.2.1 Access to the resources of the park	127
5.3.2.2 Free entrance	128
5.3.2.3 Job provision	129
5.3.2.4 Economic benefits	130
5.3.3 Better communications with the communities	130
5.3.4 Representation on park management	131
5.4 Conclusions	133
5.5 References	134
Chapter 6: Conclusions and recommendation	136
6.1 Introduction	136
6.2 Synergies between biodiversity conservation and socio-economic development	136
6.2.1 Should fishing be allowed in the park?	138
6.2.2 Biodiversity conservation	139
6.2.3 Socio-economic development of the communities	141
6.2.4 Decision-making	141
6.3 Recommendations	142
6.3.1 Approaching the communities differently	143
6.3.2 Paradigm shifts for the communities	143
6.3.3 Areas for future research	144
6.4 Achievement of the research	144
6.5 Limitations of the study	145
6.6 References	147
